FOREWORD

Labour Force statistics are pivotal to manpower planning, human resource development, and economic growth. The labour force surveys are conducted by different countries to gauge their labour force, composition of labour force, and surplus labour force etc. These statistics are basic need for policy formulation regarding labour issues, capacity building, employment, future projections and comparison with the past. Pakistan Bureau of Statistics has been conducting Labour Force Surveys (LFS) since 1963. The Survey data is extensively used by the government functionaries, researchers and other users at large.

This report presents annual estimates of the LFS 2018-19. Detailed information on labour force characteristics has been provided on the basis of statistics collected at household level to produce gender disaggregated national and provincial level estimates with urban-rural breakdown. The survey provides representative results at national level with urban-rural bifurcation. These results are provided through this survey to study the situation of employment, unemployment and participation rate, etc.

The in hand report of LFS 2018-19 is very useful document providing detailed information about labour market of Pakistan. The data from this report could be used for evidence based decision making by the policy makers. The planner, the policy makers and researchers, international agencies and general public can get benefit by using these statistics for their relevant objectivity.

I must appreciate the endeavors of Pakistan Bureau of Statistics for providing such useful and informative statistics on labour market in the country. Hopefully, this report will be beneficial for data users and stakeholders.

Chief Statistician/ Secretary

PREFACE

Labour Force Survey (LFS)), 2018-19 is the 35th round of series of surveys, initiated in 1963. Current Labour Force Survey covered 41,184 households and provide detailed information about important indicators of labour force like unemployment rate, labour force participation rates, share of employment in agriculture & non-agriculture sectors, employment by major industries and occupational groups, employment status, underemployment rate, mean hours worked and monthly wages of paid employees etc.

The field activities of the current LFS were carried out during July 2018 to June 2019 to capture the seasonal variation in four provinces including Gilgit Baltistan and Azad Jammu& Kashmir. For this purpose, total sample size was evenly distributed into four sub samples, each to be enumerated on quarterly basis. This report provides information on key socio economic aspects of the country's labour force and results are representative at national and provincial level with rural-urban breakup.

The survey, along with quantification of core variables, also estimates important attributes, migration, occupational safety, etc. The estimates are profiled according to latest classifications viz Pakistan Standard Industrial Classification (PSIC 2010 based on ISIC rev-4) and Pakistan Standard Classification of Occupations (PSCO- 2015 in line with ISCO-2008).

I seize this opportunity to acknowledge that all concerned sections of PBS viz Labour Statistics Section, Sample Design Section, Field Services Section and Data Processing Centre have performed their role with dedication and efficacy in the pursuit of actualizing the survey output by the stipulated time frame and according to the norms of adequacy, reliability and serviceability. Efforts have been made to make this report a comprehensive, informative and useful document for planners, decision makers, researchers, economists and other beneficiaries at large.

Pakistan Bureau of statistics has always been providing latest information on various sectors of the economy. The in hand report of LFS is a beneficial and useful addition in the series of PBS activities. Suggestions for further improvement of the LFS are welcome.

SUMMARY OF MAIN FINDINGS

Main findings of LFS 2018-19 in comparison with the LFS 2017-18, parenthesized in the chronological (previous vs current) order, are outlined as under:

1. **Crude Activity Rate** in 2018-19 (32.1%) is on the upper side than that of (31.7%) in LFS 2017-18. Participation rate for males (48.3%, 48.1%) decreases a bit while significant increase is noticed in the females participation rate (14.5%, 15.5%). Participation rate in rural (32.7%, 33.9%) increases significantly while goes down almost the same points in the urban areas (30.0%, 28.7%).
2. **Refined Activity Rate** follows the pattern of crude participation rates. The refined activity rate (44.3%, 44.8) increases marginally during the comparative period. Sex disaggregated rates suggest increase in the case of females (20.1%, 21.5%) and decline is observed in the case of males (68.0%, 67.7%). Similar scenario of change obtains in rural areas (47.1%, 48.7%) and urban (39.7%, 38.6%).
3. **Employment by Major Industries** Comparative surveys indicate changes in the employment shares. Increase is observed in *agriculture/forestry/hunting & fishing* (38.5%, 39.2%), *construction* (7.6%, 8.0%), *Community/social & personal services* (14.7%, 14.9%) and other category (2.0%, 2.2%) while decline is noted in *manufacturing* (16.1%, 15.0%), *wholesale & retail trade* (14.9%, 14.5%). The employment changes in the *transport storage & communication* (6.2%, 6.2%) remains steady during the comparative periods.
4. **Employment Status** Comprises *Employees* constitute the largest group (39.8%) followed by *own account workers* (35.8%), *contributing family workers* (22.9%) and *employers* (1.5%). More than one-half females workers toil as *contributing family workers* (56.9%) while more than eight out of ten males are *own account workers* (40.2%) and *employees* (45.1%). As for change during the comparative periods, *employees* (42.4%, 39.8%) lose stream while *own account workers* (34.8%, 35.8%), *contributing family workers* (21.4%, 22.9%) gain stream and *employers* (1.4%, 1.5%) approximates the same.
5. **Unemployment rate** jumps from (5.8%) in 2017-18 to (6.9%) in the LFS 2018-19. Increase is observed both in case of males (5.1%, 5.9%) and females (8.3%, 10.0%). Generally, rate in females is more pronounced as compared to males and the same is observed during the comparative periods. Area-wise disaggregated figures indicate that unemployment rate in urban areas (7.2%, 7.9%) increased during the comparative due to reverse configuration in males and females rates while increase is noticeable in the rural areas (5.0%, 6.4%). The sex disaggregated figures show that increase is more pronounced in case of rural females (5.9%, 8.5%) than that of rural males (4.7%, 5.5%) during the comparative period.
6. **Activity Status** comprises of *formal* and *informal* sectors. *Informal* sector accounts for more than seven out of ten (72.4%) of non-agricultural employment, more in rural (76.7%) than in urban areas (68.1%). On the other hand, *formal* sector activities are concentrated more in urban areas (31.9%) than in rural areas (23.3%). Share of females in comparison with respective share of males is more evident in *urban formal* (39.5%) and *rural informal* (78.6%) while, share of males are more prominent in *rural formal* (23.6%) and *urban informal* (69.0%). Employed in formal sector decreases (28.0%, 27.6%), while employed in informal sector increases marginally (72.0%, 72.4%) during the comparative periods. Shares of male's employment scale down in formal while that of females scale up in the same sector. In the informal sector, employment of males increases while in case of females decreases during the comparative periods

METHODOLOGY

Introduction

Pakistan Bureau of Statistics has been carrying out Labour Force Survey (LFS) since 1963. The questionnaire and methodology of the survey have been undergoing pertinent improvements through the forum of “Panel on Labour Statistics” comprising all important stakeholders to keep current with best practices. The questionnaire was revised in 1990 to include probing questions on marginal economic activities, likely to be carried out mostly by women and tend to go unrecorded with conventional questions. The questionnaire was further improved in 1995 to reckon with the size and composition of migration and informal sector. The scope of the survey was extended in 2001-02 to take the stock of occupational safety and health of employed persons. The questionnaire was further articulated for undertaking 1st quarterly LFS 2005-06. This practice has since been continuing. Last meeting of the Panel was held to review the questionnaire and methodology of the LFS 2017-18. The surveys conducted so far are given at Annexure-I.

2. This report presents annual results of LFS 2018-19. The survey’s sample size comprises of 41,184 households divided up into four distinct quarterly representative at National level with urban rural breakdown.

Objectives

3. The major aim of the survey is to collect a set of comprehensive statistics on the various dimensions of country’s civilian labour force as a means to pave the way for skill development, planning, employment generation, assessing the role and importance of the informal sector and, sizing up the volume, characteristics and contours of employment. The broad objectives of the survey are as follows:

- To collect data on the socio-demographic characteristics of the total population i.e. age, sex, marital status, level of education, current enrolment and migration etc;
- To acquire current information on the dimensions of national labour force; i.e. number of persons employed, unemployed, and underemployed or out of labour market;
- To gather descriptive facts on the engagement in major occupational trades and the nature of work undertaken by the institutions/organizations;
- To profile statistics on employment status of the individuals, i.e. whether they are employers, own account workers, contributing family workers or paid employees (regular/casual);
- To classify non-agricultural enterprises employing household member(s) as formal and informal;
- To quantify the hours worked at main/subsidiary occupations;
- To provide data on wages and mode of payment for paid employees;
- To make an assessment of occupational health and safety of employed persons by causes, type of treatment, conditions that caused the accident/injury and time of recovery; and

- To collect data on the characteristics of unemployed persons i.e. age, sex, level of education, previous experience if any, occupation, industry, employment status related to previous job, waiting time invested in the quest for work, their availability for work and expectations for future employment.

Reference Period

4. Reference period is week i.e. seven days before the date of enumeration.

Field Operation

5. PBS is the national statistical organization responsible for collection, processing, compilation and dissemination of statistics. It has 34 Regional/Field Offices located all over Pakistan. These offices are equipped and manned with regular and trained field staff for the collection of data from the field.

6. In order to evolve dynamics of field enumeration in line with the survey's objectives, training is imparted to the concerned staff on interviewing techniques and other procedure to be used in the enumeration. For quality control, supervisors from Regional/Field Offices and headquarter, make frequent field visits to keep the collection process on track.

Data Processing and Editing

7. Soon after data collection, the supervisors edit, check and clean the filled-in questionnaires manually for consistency and completeness and refer back to field where necessary.

8. Editing and coding is carried out by Regional/Field offices, while checking is done at headquarter by the subject matter section. Computer edit checks are applied to get even with errors identified at the stage of data entry. The relevant numerical techniques are used to eliminate erroneous data resulting from mistakes made during coding. The survey records are further edited and rectified through a series of computer processing stages.

Sampling Plan

9. **Universe:** The universe for Labour Force Survey consists of all urban and rural areas of the four provinces of Pakistan and Islamabad excluding military restricted areas. The population of excluded areas constitutes about 1% of the total population.

10. **Sample Design:** A stratified two-stage sample design is adopted for the survey.

11. **Sampling Frame:** Pakistan Bureau of Statistics (PBS) has developed its own sampling frame for both urban and rural domains. Each city/town is divided into enumeration blocks. Each enumeration block is comprised of 200 to 250 households on the average with well-defined boundaries and maps. The frame used in this survey was the most recent frame which is updated through Population and Housing Census 2017.

Stratification Plan

12. **Rural Domain:** Each administrative district in the Punjab, Sindh and Khyber Pakhtunkhwa (KP) is considered an independent stratum whereas in Balochistan, each administrative division constitutes a stratum.

13. **Urban Domain:** All administrative divisions in the four provinces, constitutes separate stratum.

14. **Selection of primary sampling units (PSUs):** Enumeration blocks in both Urban and Rural domains are taken as Primary Sampling Units (PSUs). Sample PSUs from each ultimate stratum/sub-stratum are selected with probability proportional to size (PPS) method of sampling scheme. In both Urban and Rural domains, the number of households in an enumeration blocks considered as measure of size.

15. **Selection of secondary sampling units (SSUs):** The listed households of sample PSUs are taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 12 from each urban sample PSU and 16 from rural sample PSU are selected with equal probability using systematic sampling technique with a random start.

16. **Sample Size and Its Allocation:** A sample of 41,184 households is considered appropriate to provide reliable estimates of key labour force characteristics at National/Provincial level with Urban and Rural breakup. The entire sample of households (SSUs) is drawn from 2876 Primary Sampling Units (PSUs) out of which 1668 are rural and 1208 are urban. The overall sample has been distributed evenly over four quarters independently. The distribution of sample PSUs and SSUs in the urban and rural domains of the four provinces is as under: -

SAMPLE SIZE AND ITS ALLOCATION

(Nos.)

Province/Area	Sample Enumeration Blocks/ Villages (PSUs)			Sample Households (SSUs)		
	Rural	Urban	Total	Rural	Urban	Total
Khyber Pakhtunkhwa	236	220	456	3776	2640	6416
Punjab	724	616	1340	11584	7392	18976
Sindh	504	196	700	8064	2352	10416

Pakistan	1668	1208	2876	26688	14496	41184

Method of Data Collection

17. Data are collected by direct interview method. Generally, the head of household is chosen to provide information about all members of the household. In case of his/her non-availability at the time of interview, some other informed member of the household down the line is interviewed. The total sample for the year is evenly distributed for enumeration on quarterly basis to offset the effect of seasonal variations. The information collected however relates to the week preceding the date of enumeration.

Coverage

18. The survey covers all urban and rural areas of the four provinces of Pakistan and Islamabad excluding Federally Administered Tribal Areas (FATA) and military restricted areas. The population of excluded areas constitutes about 2% of the total population.

19. All sample enumeration blocks in urban areas and mouzas/dehs/villages in rural areas were enumerated except 172 households which were not covered due to non-contact or refusal cases in urban and rural areas. However, the number of sample households (41,012) enumerated as compared to total sample size (41,184) is high as response rate is (99.58%). Province-wise detail of dropped sample areas (PSUs) are shown as under:

RELIABILITY OF ESTIMATE

Notwithstanding complete observance of the requisite codes to ensure reliability of data, co-efficient of variations and confidence intervals computed in the backdrop of 5% margin of error exercised for determining sample size, are also given below to affirm the reliability of estimates.

CONCEPTS AND DEFINITIONS

A brief explanation of the key concepts and definitions follows.

1. **Sex Ratio** is the average number of males per 100 females.
2. **Literacy rate** expresses all those persons ten years of age and above who could read and write in any language with understanding, as percentage of the population ten years and above.
3. **Level of education** is categorized as follows:
 - i) **Below Matric** comprises less than ten (10) years of schooling.
 - ii) **Matric but less than intermediate** encompasses ten (10) to eleven (11) years of education.
 - iii) **Intermediate but less than Degree** entails twelve (12) to thirteen (13) years of education.
 - iv) **Degree & above** comprises fourteen (14) or more years of education.
4. **Household** constitutes all those persons who usually live together and share their meals. A household may consist of one person or more who may or may not be related to each other.
5. **Migration** means the population's movement from one administrative district to another administrative district at any time of their lives and excludes the ones moved within the current district.
6. **Economically Active Population** comprises all persons of either sex who provide labour services for the production of goods and services as defined by the United Nation System of National Accounts, during the reference period. The production of goods and services includes:
 - i) All production and processing of primary products whether for the market, barter or, own consumption,
 - ii) The production of all other goods and services for the market,
 - iii) The households which produce such goods and services for the market and own consumption, and
 - iv) Own account construction.
7. **Currently Active Population** or labour force comprises all persons ten years of age and above who can be categorized as employed or unemployed during the reference period i.e. one week preceding the date of interview.
8. **Crude activity rate** is the currently active population expressed as a percentage of the total population in Pakistan.

9. **Refined activity rate** is the currently active population expressed as a percentage of the population 10 years and above. This rate enables international comparison by factoring in the effect of age composition.

10. **Augmented activity rate** is based on probing questions from the persons not included in the conventional measure of labour force, to net-in marginal economic activities viz subsistence agriculture, own construction of one's dwelling etc. Conventionally, persons 10+ aged reporting housekeeping and other related activities are considered out of labour force. However, from the perspective of time use, they are identified as employed if they have spent time on a specific set of marginal economic activities mentioned afore.

11. **Employment** comprises all persons ten years of age and above who worked at least one hour during the reference period and were either "paid employed" or "self-employed". Persons employed on permanent/regular footings have not worked for any reason during the reference period are also treated as employed, regardless of the duration of the absence or whether workers continued to receive a salary during the absence. The survey obtains information on the duration of absence as well as on other formal job attachment characteristics of workers in paid and self-employment. In line with augmented participation rates, a loose upper bound of employment can be drawn up by including the persons engaged in marginal economic activities.

12. **Occupation** means the type of work done during the reference period by the persons employed (or the kind of work done previously if unemployed), irrespective of the industry or the status in employment of the person. It provides description of a person's job. Occupation is classified according to Pakistan Standard Classification of Occupations (PSCO)-2015 based on the International Standard Classification of Occupations, ISCO-2008.

13. **Industry** means the activity of the firm, office, establishment or department in which a person is employed or the kind of business, which he/she operates. The activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Industry is classified according to Pakistan Standard Industrial Classification (PSIC) used for national accounts developed in 2010 (Rev-4) on the basis of the International Standard Industrial Classification (ISIC) Rev-4 released by United Nations in 2008.

14. **Self-employment job** is a job where the remuneration is directly dependent upon the profits, or the potential profits, derived from the goods and services produced.

15. **Status in Employment** refers to the type of explicit or implicit contract of employment of the person with other persons or organization. Status of an economically active individual with respect to his/her employment i.e. whether he/she is an employer, own account worker, employee or unpaid family worker is defined as follows:-

16. **Employee** is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece rates or pay in kind. Employees are divided into

- *Regular paid employees with fixed wage*
- *Casual paid employee*
- *Paid worker by piece rate or work performed*
- *Paid non-family apprentice*

17. **Employer** is a person working during the reference period, on own-account or with one or a few partners at a “self-employment job” with one or more employees engaged on a continuous basis.

18. **Own account worker** is a person working during the reference period, on own-account or with one or more partners at a “self-employment job”, without any employee engaged on a continuous basis; but, possibly, with one or more contributing family workers or employees engaged on an occasional basis. It includes owner cultivator, share cropper and contract cultivator.

19. **Contributing family worker** is a person who works without pay in cash or in kind on an enterprise operated by a member of his/her household or other related persons.

20. **Other** includes member of a producer’s cooperative, etc.

21. **Informal Sector** in Pakistan is formulated in terms of household enterprise and size of employment. For statistical purpose, the provenance of employment in informal sector is given as follows:

- All household enterprises owned and operated by own-account workers, irrespective of the size of the enterprise (informal own-account enterprises),
- Enterprises owned and operated by employers with less than 10 persons engaged. It includes the owner (s) of the enterprise, the contributing family workers, the employees, whether employed on an occasional or a continuous basis, or as an apprentice, and
- Excluded are all enterprises engaged in agricultural activities or wholly engaged in non-market production.

22. **Household Enterprise** or equivalently, an unincorporated enterprise, is a production unit that does not have a separate legal entity independent of the household(s) or household members that own it. It is neither a corporation nor has a complete set of accounts that would permit a clear distinction between the production activities of the enterprise from the other activities of the owner(s) i.e. it is not a quasi-corporation.

23. **Underemployment (Time-related)** comprises all employed persons who during the reference period satisfied the following two criteria simultaneously:

- i) Worked less than 35 hours per week,
- ii) Sought or were available for alternative or additional work.

24. **Underemployment (Time-related) Rate** is the time related underemployed population expressed as a percentage of the currently active population.

25. **Unemployment** in Pakistan comprises all persons ten years of age and above who during the reference period were:

- i) **“Without work”** i.e. were not in paid-employment or self-employment; and

- ii) **“Currently available for work”** i.e. were available for paid employment or self-employment: or
- iii) **Not currently available** for the following reasons: illness, will take a job within a month, is temporarily laid off, is an apprentice and is not willing to work: or
- iv) **Seeking work** during last week.

26. **Unemployment rate** is the unemployed population expressed as a percentage of the currently active population.

27. **Multiple job holders** relates to persons who during the reference period carried out more than one economic activity. The survey obtains information about the occupation, industry, status in employment and informal sector characteristics of secondary jobs.

28. **Hours actually worked** relates to the number of hours worked in the main and secondary jobs during the reference period, including any overtime and excluding any absence from work.

29. **Population not currently active** or “persons not in the labour force” comprises all persons who were not employed or unemployed during the reference period and hence not currently active. They are classified into the following categories:-

- a) Attending educational institutions,
- b) Engaged in household duties,
- c) Retired or old age,
- d) Too young to work,
- e) Unable to work/handicapped,
- f) Agricultural landlord and/or property owner; nature of ownership includes land, commercial/residential buildings, cinemas, hotels, petrol pumps, power looms, etc. (given on rent or lease). They are owners but they do not work for their properties,
- g) Others (persons who derive their income solely from royalties, dividends, etc.; engaged in immoral pursuits such as prostitutes, beggars, thieves and smugglers etc.; voluntary social workers doing work outside the family enterprise, living entirely on charity, etc.)

30. **Occupational Injury/Disease** refers to any personal injury or disease resulting from an occupational accident/ disease which occurs to employed person (s) i.e. an individual occurrence or event arising out of or in the course of work. Some occupational injuries are serious enough to need treatment, either at hospital, or by a doctor, nurse or some other kind of medical professional, and may mean that the injured person is unable to work, or to work normally, for some time, i.e. they have to take time off work. Other injuries may be less serious/incapacitating, so that the injured person may be able to return to work quickly. All such occupational injuries are taken into consideration. An injury should only be considered as an occupational injury if

it was received at the person's work place or in the course of the person's work. Injuries received on the way to or from work are also considered to be occupational accidents. For the purpose of statistics of occupational injuries, the following terms and definitions are used:

- a) **Occupational accident** is an unexpected and unplanned occurrence, including acts of non-consensual violence arising out of or in connection with work which results in personal injury, disease or death;
- b) **Commuting accident** is an accident occurring on the habitual route between the place of work and: i) the worker's principal or secondary residence; ii) the place where the worker usually takes his/her meal; iii) the place where he/she usually receive his/her remuneration; or iv) the place where he/she receives training, which results in death or personal injury involving loss of time; travel, transport or road traffic accidents in which workers are injured and which arises out of or in the course of work, i.e. while engaged in an economic activity, or at work, or carrying on the business of the employer.
- c) **Occupational injury** is any personal injury, disease or death resulting from an occupational accident;
- d) **Case of occupational injury** is the case of one person incurring an occupational injury as a result of one occupational accident;
- e) **Occupational disease** is a disease contracted as a result of an exposure to risk factors arising from work activity;
- f) **Incapacity for work** means inability of the injured person to perform normal duties of work;
- g) **Fatal occupational injury** is one which leads to death within one year of the day of the occupational accident causing the injury;
- h) **Loss of working time** means the count of time started from the day of accident to the day prior to the day of return to work measured as calendar days, week days or working days in accordance with the severity of the injury. In the case of recurrent absences due to a single case of occupational injury, each period of absence should be measured and the resulting number of days lost for each period summed to arrive at the total loss of working time for the case of injury. Temporary absence from work of less than one day for medical treatment should not be included in time lost.

31. **Range of data** includes, generally, the information about the number of persons employed who suffered an injury or disease in the 12 months prior to the reference period that caused the worker to take time off and/or consult a doctor. In addition, for each injury or disease suffered, it also obtains information about

- (i) the act that caused the accident or disease,
- (ii) whether time off was taken or treatment was received as a result
- (iii) the conditions that caused the accident or injury
- (iv) the time of recovery

32. ***Income from paid employment*** relates to the amount of money earned by persons in paid employment in their main job. The income may be earned in cash or in kind, and is reported net of security contributions and, deductions for pensions and income tax. It includes the value in rupees of income in kind as well as regular or adhoc bonuses. The information on earnings is recorded per week or month and the information on bonuses is recorded per year, to convert it later on monthly basis. The survey does not obtain information on the income of self-employed persons.

33. ***Entitlement to annual leave and sick leave*** relates to the number of days in the year that workers in paid employment are entitled to obtain and sick leave.

34. The questionnaire adopted for the Survey is given at Annexure-II.

SALIENT FEATURES

The Survey's estimates are based on the data of 41,012 sample households enumerated through July 2018 to June 2019. Findings are presented in the form of proportions and percentages to provide for all-purpose employability. The population of Pakistan as per Planning, Development and Reforms (Annual Report 2019-20) is estimated at 214.49 million on 1st January 2019. The same has been used in arriving at absolute numbers in the report.

2. In comparison with that of the preceding LFS 2017-18, a brief account of the survey's main annual estimates, *parenthesized in the same order*, is given in the following paragraphs.

Marital Status

3. Marital status (Table-1) consists of mainly in the categories of *never married* and *married*. *Widowed* and *divorced* constitute minute part of the configuration. *Never married* scale down (42.3%, 41.8%) while *married* (53.5%, 54.1%) trend up *Widowed* (3.9%, 3.8%) decrease a bit and *divorced* (0.3%, 0.3%) level same during the comparative period. See table-1 (figure-1) and Statistical Tables-4 (Annex-III).

Sex Ratio

4. Comparative figures for the overall sex ratio (103, 103) and rural (102, 102) level same during the comparative period 2017-18 and 2018-19 while urban sex ratio (106, 105) decreases

during the same period. Sex ratios in Punjab (99, 99) and KP (98, 98) level same while decline in Sindh (113, 110) and gear up in Balochistan (119, 121) during the comparative periods. Migration, as one of the main factor in determining the size and composition of population may be viewed for possible explanation in this regard. Relevant information is presented in the following Table-2 (figure-2).

Literacy

5. Literacy rate overall trends up (62.3%, 62.4%). Increase is noted in the case of males (72.5%, 73.0%) while decrease is observed in the case of females (51.8%, 51.5%). Area-wise rates suggest increase in rural (53.3%, 53.7%) while decrease is observed in urban rates (76.6%, 76.1%). Male-female disparity seems to be narrowing down with the time span. Literacy rate declines in all provinces: KP (55.3%, 52.4%), Sindh (62.2%, 61.6%) and Balochistan (55.5%, 53.9%) except in Punjab (64.7%, 66.1%) where significant increase is observed. In LFS 2018-19, defunct FATA is merged in KP as a result decline is observed in literacy rate. See table-3 (figure-3).

Level of Education

6. The comparative shares of **literate** signify improvement in the profile of educational attainment (62.3%, 62.4%). The share of *No formal education* trends down (1.6%, 0.6%). All categories seem to be on rise except in the category of below *matric* (36.9%, 36.9%) which is leveled during the comparative period. Generally, males are more educated compared to females and disparity is narrowing down with the time span. See table-4 and Statistical Table-3 (Annex-III)

Migration

7. Proportion of migrants and size of population seem to be correlated positively. In this regard, provinces make a descending sequence of Punjab (65.4%), Sindh (20.1%), KP (14.1%) and Balochistan (0.4%). Migration increases in Sindh (18.3%, 20.1%) and KP (10.5%, 14.1%) while curves down in Punjab (70.3%, 65.4%) and Balochistan (0.9%, 0.4%). Sex disaggregated proportions show significant variations in overall configuration, more in Punjab and KP while less in Sindh and Balochistan. Further, in comparison with proportions of females, the proportions of male migrants are higher in all provinces except in Punjab.

8. **Inter provincial migration** indicates positive relationship with the level of urbanization and economic development. The proportions of inter provincial migrants is sequenced in the decreasing order of Punjab (44.7%), Sindh (33.4%), KP (21.1%) and Balochistan (0.8%). Inter-provincial migration is on rise in KP and Sindh while recedes in Punjab and Balochistan. In comparison with the proportions of males, the proportions of female migrants are higher in all provinces except in KP.

9. The proportion of **intra provincial migrants** indicates positive relationship with the size of population. Provinces form expected descending sequence in the order of Punjab (70.7%), Sindh (16.6%), KP (12.3%) and Balochistan (0.4%). Similar pattern obtains by sex. Intra-provincial migration decreases in Punjab (76.9%, 70.7%) and Balochistan (0.8%, 0.4%) while increases in Sindh (14.4%, 16.6%) and KP (7.9%, 12.3%). Similarly, proportion of male migrants are higher than that of female migrants in all provinces except in Punjab. See table-5 & 5.1 and Statistical Tables-11 (Annex-III).

10. Streams of migration flow within and between urban and rural areas. Since urbanization is the foreseeable factor with the process of economic development, rural to urban migration steals most of the attention due to enormity of substantial demand on the socio-economic resources.

11. **Rural to urban migration** accounts for about one in seventh (14.9%) of the total flow of migrants within and between areas. Males are more savvy to go urban (18.4%) compared to females (12.4%). Proportions by provinces form a descending sequence of KP (30.7%), Punjab (14.2%), Sindh (6.4%) and Balochistan (1.9%). Proportions by sex are higher for males in Punjab and KP while lower in Sindh and Balochistan.

12. As for change during the comparative period, the rural to urban migration is trending down in KP (37.6%, 30.7%) and Balochistan (14.0, 1.9%), trending up in Punjab (14.0%, 14.2%) while levels same in Sindh (6.4%, 6.4%) during the comparative period. Proportions by sex are higher for males in Punjab and KP while lower in Sindh and Balochistan. See table 5.2 (figure-4) and Statistical Table-11.2 (Annex-III)

Reasons of Migration

13. According to the size of the relevant proportions, the *marriage* (33.2%) and *movement with parents* (20.1%) constitute the foremost reasons for migration. The former is proffered more by females while the latter's calculus owes more to males than females. Migration *with spouse* (11.8%) and *homecoming* (10.5%) make the next important couplet. Again, the former is related more by females while the latter is determined more by males than females. *Found a job* (6.5%) and *searching for job* (4.3%) is the next couplet of reasons narrated more by males than females.

14. *Change of residence* (3.9%) and *assorted other explanation* (1.8%) are the fourth most important set of reasons, put forth more by males than females. The last important reasons of migration are *job transfer* (1.6%), *business* (1.6%), *security/law & order situation* (1.3%), *education* (0.9%), and *searching for better agriculture land* (0.8%) are all related more by males than females.

15. As for change during the period marked by the consecutive surveys, the comparative figures of most of the striking reasons seem to decline while rest of the categories are

characterized with marginal changes. See table-6 (figure-5) and Statistical Table-13 (Annex-III).

Figure-5: MIGRANTS POPULATION BY MAIN REASONS OF MIGRATION

Migrants Employed by Employment Status

16. More than eight out of ten (84.8%) of migrants are either *employees* (50.3%) or *own account workers* (33.1%). About one in seven (14.2%) are *contributing family workers* and one in forty (2.4%) are *employers*. More males than females are engaged as *employees* (54.9%, 34.3%) and *own account workers* (36.3%, 22.4%) while more females than males work as *contributing family workers* (43.1%, 5.8%). *Employers* seem to be masculine in composition. As for change during the comparative period, *employees* scale down while other categories of employment; *contributing family worker* and *own account workers* scale up and *employers* level same during the comparative period. See table-7 and Statistical Table-14 (Annex-III).

Labour Force Participation Rates: Crude

17. *Crude participation rate* (32.1%) in 2018-19 is on the upper side than that of (31.7%) in LFS 2017-18. Participation rate for males (48.3%, 48.1%) lowers a bit while significant increase is noticed in the female participation rate (14.5%, 15.5%) Participation rate in rural areas (32.7%, 33.9%) increases significantly while decreases almost the same points in the urban areas (30.0%, 28.9%). Participation rates in KP (24.4%, 26.4%), Sindh (30.2%, 30.5%) and Balochistan (24.9%, 26.8%) curves up while decline a bit in Punjab (35.0%, 34.9%) during the comparative period. *Augmented participation rates* seem to be curving up in KP and Punjab while curves down in Sindh. In Balochistan, the *augmented participation rate remains same during the comparative period*. See table-8 (figure-6) and Statistical Tables-15 to 15.4 and 16 to 16.4 (Annex-III).

Figure-6: CRUDE ACTIVITY (PARTICIPATION) RATES BY SEX FOR PAKISTAN, RURAL AND URBAN

APR:- Augmented Participation Rates are based on additional probing questions on marginal economic activities asked from persons especially females engaged in housekeeping and other related activities.

Labour Force Participation Rates: Refined

18. Generally, *refined activity rates* follow the pattern of crude participation rates. The refined activity rate (44.3%, 44.8%) increases marginally during the comparative period. Sex disaggregated rates suggest increase in the case of females (20.1%, 21.5%) while decline is observed in case of males rate (68.0%, 67.7%). Similar scenario of change obtains in rural areas (47.1%, 48.7%) and urban (39.7%, 38.6%). Rates in KP (35.4%, 38.5%), Sindh (42.3%, 43.3%) and Balochistan (39.0%, 40.8%) increase while a bit decline in the case of Punjab (47.9%, 47.4%). Labour Force Participation Rates: Age Specific

19. Table-10 (figure-8) presents comparative picture of *age specific participation rates* (ASPRs). As expected, the age intervals between *twenties* and *fifties* (20-59) mark the most productive period of life. The comparative size of gender disparity, though, considerable in all

age intervals, has generally been widen in time span. As for change during the comparative periods, ASPRs of *teens (10-19)* decline while increase is observed in the *Age Specific Participation Rates (ASPRs)* of the age groupings (20-59). In the age group *sixties & over*, decline is observed in the ASPRs during the comparative period. Gender disaggregates rates make the same scenario during the same period. See table-10 (figure-8) and Statistical Table-15 (Annex-III).

Labour Force: Absolute Figures

20. The absolute figures of Labour Force is the multiple of crude participation rate with mid-reference year estimate of the population. The numbers of employed and unemployed persons are the “labour force multiplied with their percentages”. The labour force increased from 65.50 million in 2017-18 to 68.75 million in 2018-19. The volume of labour force increases in the descending order of Punjab (1.28 million), KP (0.89 million), Balochistan (0.87 million) and Sindh (0.21 million) respectively. The change in the provincial profile is more pronounced in the case of rural than urban areas. Further, the change is more pronounced in males than females in all provinces. See Table-11.

Figure –9: DISTRIBUTION OF EMPLOYED PERSONS: MAJOR INDUSTRY DIVISIONS

Employed: Major Occupational Groups

23. *Skilled agricultural, forestry & fishery workers* constitute the largest group (33.5%) of the total employed in 2018-19 followed by *elementary occupations* (17.2%), *service and sales workers* (16.0%), *craft & related trades workers* (13.5%), *plant/machine operators & assemblers* (6.9%), *professionals* (5.1%), *technicians & associate professionals* (3.8%), *managers* (2.6%) and *clerical support workers* (1.4%). About nine-tenth of the female workers toil in *farming activities* (60.8%), *elementary occupations* (15.2%) and *craft & related trade workers* (11.9%) while males seem to be distributed a sort of proportionately in all activities. All categories seem to be curving up except *service and sale workers* and *elementary occupation* which are curving down during the comparative periods. See table-14 (Figure-10) and Statistical Table-18 (Annex-III).

24. *Employees* constitute the largest group (39.8%) followed by *own account workers* (35.8%), *contributing family workers* (22.9%) and *employers* (1.5%). More than one-half females workers toil as *contributing family workers* (56.9%) while more than eight out of ten males are *own account workers* (40.2%) and *employees* (45.1%). As for change during the comparative periods, share of *employees* (42.4%, 39.8%) trending down while *own account workers* (34.8%, 35.8%), *contributing family workers* (21.4%, 22.9%) trending up and share of *employers* (1.4%, 1.5%) approximates the same. See table-15 and Statistical Table-19 (Annex-III).

Employed: Mean Hours Worked

25. Mean hours worked decrease during the comparative period (47.4, 46.6), more equivalently in the case of males (51.0, 50.9) than that of females (34.7, 32.2). Similar scenario obtains in rural (45.5, 44.3) while average hours worked by the employees in the urban areas (51.1, 51.2) show a minor increase during the comparative period. Mean hours worked in all provinces show decreasing pattern in the descending order of Sindh (48.9, 48.6), Punjab (47.3, 46.6), KP (44.9, 42.8) and Balochistan (47.8, 46.3) Changes are more pronounced in the rural areas than that of urban areas in all provinces. See table-16 and Statistical table No 41 (Annex-III).

Employed: Informal Sector

26. *Informal* sector accounts for more than seven out of ten (72.4%) of non-agricultural employment, more in rural (76.7%) than in urban areas (68.1%). On the other hand, *formal* sector activities are concentrated more in urban areas (31.9%) than in rural areas (23.3%). Share of females in comparison with respective share of males is more visible in *urban formal* (39.5%) and *rural informal* (78.6%) while, share of males is more prominent in *rural formal* (23.6%) and *urban informal* (69.0%). Employed in formal sector decreases (28.0%, 27.6%), while employed in informal sector increases marginally (72.0%, 72.4%) during the comparative period. Shares of males employment wane in formal while that of females waxes up in the same sector. In the informal sector, employment of males increases while in case of

females decreases during the comparative periods. See table-17 and Statistical Table-21 (Annex-III).

Major Industry Divisions: Informal Sector

27. According to size of respective shares, the industry groupings form a descending sequence of *wholesale and retail trade* (32.1%), *manufacturing* (20.9%), *construction* (17.4%), *community, social & personal services* (15.5%) and *transport* (12.0%). The *other* category (comprising of *mining & quarrying, electricity, gas & water and finance, insurance, real estate & business services*) accounts for about two percent. *Manufacturing* accounts for near three out of five (57.5%) of females as compared to near about one out of six (17.7%) of males, *wholesale & retail trade* employed more than three out of ten (35.5%) of males compared to about one in seventeen (5.5%) of females while *community/social & personal services* embrace more than three in ten (35.5%) of females compared to about one in seventh (13.0%) of males. Distribution of workers by industries makes two distinct groups. *Manufacturing, wholesale & retail trade* and *community, social & personnel services* seem to be trending down while *construction, transport, storage & communication and others* employment categories trend up during the comparative period. See table-18 and Statistical Table-22 (Annex-III).

Major Occupational Groups: Informal Sector

28. Near one in three (31.7%) are reported as *service and sales workers*, while near one-half as *craft & related trades workers* (27.5%) and *elementary occupations* (19.1%). The remaining groups make a descending sequence of *plant/machine operators & assemblers* (11.5%), *technicians & associate professionals* (3.7%), *professionals* (3.4%), *managers* (2.8%) and *skilled agricultural, forestry & fisheries* (0.1%). Near about three-fifth (55.4%) of females compared to about one-fourth (24.0%) of males are engaged in *craft & related trade* activities. Comparative share of females (9.4%) is also obvious versus males (2.7%) in the case of *professionals*. Share of males are higher in the rest of the occupational groups. As far change during the comparative periods is concerned, *managers*, *Plant/machine operators & assemblers* and *Elementary occupation* trend up while *Professional*, *technicians & associate professionals*, *craft & related trades workers* trend down marginally, while the respective shares of the rest of the tabulated grouping are in proximity with each other. See table-19 and Statistical Table-23 (Annex-III).

Employment Status: Informal Sector

29. The employment status mainly consists in the categories of *employees* (44.9%) and *own account workers* (43.7%). In both categories the share of males are more than the share of females. About one in eleven (8.6%) is reported as *contributing family workers* and near one in thirty three (2.8%) comprises of *employers*. The male *contributing family workers* (7.7%) are about half of females (16.2%) share while *employers* are predominantly male intensive. As for change during the comparative periods, *employers* (2.6%, 2.8%) and *contributing family workers* (8.9%, 8.6%) make approximate the same pattern during the comparative periods. *Own account workers* (41.0%, 43.7%) trend up while *employees* (47.5%, 44.9%) lose stream during the comparative periods, See Table-20 and Statistical Table-24 (Annex-III).

Unemployment Rates: Overall

30. The social security net in Pakistan is far from comprehensive. The distribution of assets is highly skewed and work to earn income in rainy season is simply not available to most of the public. Thus, a little segment of the population can afford to remain off the work. Further, employment scene is dominated by agriculture and informal activities and very easy to enter and exit in these sectors. As such, most of the people tend to get engaged into some sort of economic activities irrespective of any considerations regarding the size of reward and working age, in order to make both the ends meet. Thus, unemployment rate in Pakistan tends to be estimated lower than perceived.

31. Unemployment rate jumps from (5.8%) in 2017-18 to (6.9%) in the LFS 2018-19. Increase is observed both in case of males (5.1%, 5.9%) and females (8.3%, 10.0%). Generally the unemployment rate in females is more pronounced as compared to males as seems in the listed table. Sex-area disaggregated figures indicate that unemployment rate in urban areas (7.2%, 7.9%) increase to opposite configuration in males and females shares while increase is noticeable in the rural areas (5.0%, 6.4%). Rural figures suggest significant increase both in case of males rate (4.7%, 5.5%) and females (5.9%, 8.5%). See table-21 and Statistical Table No 15(Annex-III).

Unemployment Rates: Age Specific

32. The comparative age specific unemployment rates of teens (10-19) and *twenties* (20-29) and *latter thirties* (35-39), *forties* (40-49) and *fifties* (50-59) are on rise while, that of *early thirties* (30-34) and *sixties plus* decrease during the comparative periods. Sex specific rates make a mixed trend down the age grouping. Nevertheless age specific unemployment rates of males are more harmonized with the overall rates as compared to those of females. See table-22 (figure 11) and Statistical Table-15 (Annex-III).

Unemployed: Absolute Figures

33. The volume of unemployed persons increases by 0.93 million from 3.78 million in 2017-18 to 4.71 million in 2018-19. Area and sex wise configuration suggest that changes are more significant in rural areas and, for females. Volume of unemployed increases in all provinces in descending order of Punjab (0.66 million) and KP (0.33 million), Balochistan (0.05 million) except in Sindh (-0.14 million) where decline is observed. Change is more pronounced in the case of females in Punjab and KP compared to Sindh and Balochistan.

Further, the change is more visible in rural than urban areas in KP and Punjab while almost the same variation both in rural and urban figures in Sindh and Balochistan.

Underemployment Rates: Time-related

34. Underemployment rate decreases from (1.3%) in 2017-18 to (1.2%) in 2018-19 equivalently for females (1.9%, 1.6%) and males (1.2%, 1.0%). The same scenario is obtained in rural (1.5%, 1.4%) and urban areas (0.8%, 0.7%). Underemployment rate signify increasing latitude to make alternative option to multiple jobs in order to help handle with the cost of living. See table-24.

Employed: Occupational Safety and Health

35. About one in thirty three (3.3%) employed persons report some sort of occupational injury/disease in the last 12 months preceding the date of enumeration that resulted into the loss of working time or the consultation with a practitioner. The percentage suffered finds male workers more vulnerable (3.9%) relative to female workers (1.2%). Similarly, rural workers (3.7%) are more vulnerable than urban workers (2.6%). Vulnerability seems to be receding during the comparative period across the area and gender. See table-25 and Statistical Table No. 29 (Annex-III).

Employment Status: Occupational Safety and Health

38. According to the relative size of the risk profile, *employees* (47.1%), *own account workers* (38.0%), and *contributing family workers* (14.2%) take exhaustive account of the sufferers in the same order. The foremost and middle category seems to be getting more while the latter most category seem to be getting less during the comparative periods. Sex-disaggregated shares are more pronounced for males in the 1st two categories while for female in the lattermost. Employers, due to their minuscule size, do not form any pattern. See table-28 and Statistical Table-32 (Annex-III).

Types of Treatment Received: Occupational Safety and Health

39. More than four in ten (43.4%) of the sufferers is reported to have *consulted a doctor* or other medical professionals, more than one-in-ten (11.8%) get *hospitalized* and about one-third (30.7%) *took time off work*. Vulnerability decrease in the 1st group while increase in the middle and lattermost. The change is gender-even in the foremost while affects both males and females in the middle and lattermost category. The remaining one-seven (14.1%) did not avail themselves of any of the aforementioned options, wanes over time, alluding to a sort of increasing in the case of females at the workplace. See Table-29 and Statistical Table-33 (Annex-III).

Major Industry Division: Wages

40. Generally, size of wages seems to be higher in tertiary activities followed by secondary and primary assignments. The size of wage also appears to be influenced positively by the element of white-collar ness of an industry/division. The gender differential in wages seems to be influenced by the gender composition of group. Arguably, the nominal wage is trending up during the comparative period. Since females constitute much lower proportion of wage earners, a sort of anomalous position in their case is observed in certain categories, which may be attributed to sampling effect and consequential scariness of response. See Table-30 and Statistical Table-39 (Annex-III).

Major Occupation Group: Wages

41. As stated earlier, wages seem to be associated positively with the element of “white-collar ness” in an occupation. Similarly, the gender differentials in the wages indicate nexus with the gender composition of an occupational group. The more a group is masculine, the less it is likely to find females in high paid assignments and thus higher is the average wage of males as compared to that of females. This notwithstanding, data on females, being wage earners of convenience, does not befit the consideration of trend assessment. However, the feminine group of *elementary occupations* seems to be an exception though its anomalous position can be explained in terms of the greater number of in and out door chores the males are likely to perform as compared to females, in our socio-cultural setting. As for changes during the comparative periods, nominal wages seem to be trending up arguably. See Table-31 and Statistical Table-40 (Annex-III).
